**Limited Review Report
of The Consolidated Interim Financial Statement as of March 31,2026**

To the Board of Directors of Export Development Bank of Egypt (S.A.E)**Introduction**

We have performed a limited review for the accompanying Consolidated interim financial statements of Export Development Bank Of Egypt (S.A.E) which comprise of the Consolidated financial position as of 31 March 2026 and the related consolidated statements of income,comprehensive income, changes in equity and cash flows for the Three months then ended, and a summary of significant accounting policies and other explanatory notes. Management is responsible for the preparation and fair presentation of these Consolidated interim financial statements in accordance with the Central Bank of Egypt's rules issued on 16 December 2008.as amended by the regulations issued on February 26,2019 and the prevailing Egyptian Laws related to the preparation of the consolidated interim financial statements. Our responsibility is to express a conclusion on these consolidated interim financial statements based on our limited review.

Scope of Limited Review

We conducted our limited review in accordance with Egyptian Standard on Review Engagements No. 2410, "Limited Review of Interim Financial Statements of an Entity Performed by its Independent Auditor." A limited review of interim financial statements consists of making inquiries, primarily of persons responsible for financial and accounting matters in the bank, and applying analytical and other limited review procedures. A limited review is substantially less in scope than an audit conducted in accordance with Egyptian Standards on Auditing and consequently does not enable us to obtain assurance that we would become aware of all significant matters that might be identified in an audit. Accordingly, we do not express an audit opinion on these consolidated interim financial statements.

Conclusion

Based on our limited review, nothing has come to our attention that causes us to believe that the accompanying consolidated interim financial statements do not present fairly, in all material respects, the consolidated financial position of Export Development Bank of Egypt (S.A.E) as of 31 March 2026 and of its consolidated financial performance and its consolidated cash flows for the Three months then ended in accordance with the Central Bank of Egypt's rules issued on 16 December 2008 as amended by the regulations issued on February 26,2019 and in the light of the prevailing Egyptian laws and regulations relating to the preparation of these consolidated interim financial statements.

* The accompanying notes are an integral part of these financial statements.

1. General information

Export Development Bank of Egypt (Egyptian Joint Stock Company) was established on July 30, 1983 in the Arab Republic of Egypt, the head office located in New Cairo at 78, south teseen, New Cairo, the bank is listed in the Egyptian stock exchange (EGX). The objective of the Bank is to encourage, develop Egyptian export activities, and assist in developing agricultural, industrial, and commercial and service exporting sectors, also to provide all banking services in local and foreign currencies through its head office and forty-Six branches and the number of employees has reached 1791 employee on the date of financial statement.

The bank's fiscal Period begins on 1st January and ends on 31st December.

The Bank's Board of Directors approved the issuance of the Consolidated financial statements for the period ended on March 31, 2026, on May 18, 2026.

2. Summary of significant accounting policies

The principal accounting policies applied in the preparation of these consolidated financial statements are set out below, these policies have been consistently applied to all the Periods presented, unless otherwise stated.

2.1 Basis of preparation of the consolidated financial statements

These consolidated financial statements have been prepared in accordance with the instructions of the Central Bank of Egypt approved by the Board of Directors on December 16, 2008, as well as in accordance with the instructions for preparing financial statements for banks in accordance with the requirements of International Financial Reporting Standard (9) "Financial Instruments" issued by the Central Bank of Egypt on February 26, 2019, and reference is made to Egyptian accounting standards in matters not specifically provided for in these rules and instructions.

The Bank has prepared the consolidated financial statements of the Bank and its subsidiaries in Accordance with Egyptian accounting standards. The subsidiaries have been entirely grouped in the consolidated financial statements, and they are the companies in which the Bank has, directly and indirectly, more than half of the voting rights or has the ability to control the financial and operational policies of the subsidiary by paying regardless of the type of activity, the bank's consolidated financial statements can be obtained from the bank's management. Investments in subsidiaries and sister companies are presented in the Bank's separate financial statements and accounted for at cost less impairment losses.

The financial statements of the companies have been compiled according to the latest financial statements of the subsidiaries on March 31, 2026.

2.2 Basis of consolidation

(a) Subsidiaries

- Subsidiaries are all entities over which the bank has owned directly or indirectly the power to govern the financial and operating policies generally accompanying a shareholding of more than one half of the voting rights. The existence and effect of potential voting rights that are currently exercisable or convertible are considered when assessing whether the bank has the ability to control the entity.
- The group fully consolidates its subsidiaries from the effective date in which control is obtained till such control ceases to exist.
- The subsidiary companies which have been owned indirectly have been consolidated from June 30, 2013.

Subsidiaries companies consolidated by the bank (The holding co.) represented in the following as at Mar 31, 2026:

A brief description of the activities of the Group:

- Egypt Capital Holding Company:

Is an Egyptian joint stock company in accordance with the provisions of Law No. 95 of 1992 and its executive regulations (holding companies) of the Egyptian Export Development Bank. The purpose of the company is to participate in establishing companies that issue their securities and increase their capital.

- International holding for Development and Financial Investments:

Is an Egyptian joint stock company in accordance with the provisions of Law No. 95 of 1992 and its executive regulations (holding companies) of the Egyptian Export Development Bank. The purpose of the company is to participate in the establishment of companies that issue their securities and increase their capital.

Beta Financial Holding Company:

Is an Egyptian joint stock company pursuant to the provisions of Law No. 95 of 1992 and its executive regulations (Holding Companies) of the Egyptian Export Development Bank. The purpose of the company is to participate in the establishment of companies that issue their securities and increase their capital.

Egyptian company for real estate investments:

Is an Egyptian joint stock company in accordance with the provisions of Law No. 159 of 1981 and its executive regulations are subordinate to the Egyptian Export Development Bank. The purpose of the company is to engage in real estate investment activity of all types throughout the Arab Republic of Egypt.

- A Beta Company for Real Estate Investments:

Is an Egyptian joint stock company in accordance with the provisions of Law No. 159 of 1981 and its executive regulations are subordinate to the Egyptian Export Development Bank. The purpose of the company is to engage in real estate investment activity of all types throughout the Arab Republic of Egypt.

Egypt Capital Real Estate Investment Company:

Is an Egyptian joint stock company in accordance with the provisions of Law No. 159 of 1981 and its executive regulations are subordinate to the Egyptian Export Development Bank. The purpose of the company is to engage in real estate investment activity of all types throughout the Arab Republic of Egypt.

EFS Financial Solutions Company:

The EFS Financial Solutions Company was established in accordance with Law 159 of 1981 and is subject to the capital market law and has been registered in the commercial registry and has obtained a license to practice the activity from financial supervisory authority.

The purchase method is used to account for the Group's acquisitions of companies. The cost of an acquisition is measured at the fair value of the assets given, equity instruments issued and liabilities incurred or accepted at the date of exchange, plus any direct costs attributable to the acquisition. Specified assets acquired and liabilities and contingent liabilities accepted are measured at their fair value at the acquisition date, regardless of the existence of any non-controlling interest. The excess of the acquisition cost over the fair value of the group's share in the net assets, including Specified assets and contingent liabilities acquired, is recorded as goodwill, and if the acquisition cost is less than the fair value of that net, the difference is recorded directly in the income statement.

B/2 - Transactions excluded when compiling the financial statements

When consolidating, transactions, balances and unrealized profits arising from transactions between group companies are excluded, and unrealized losses are excluded unless they provide evidence of impairment in the value of the transferred asset. The accounting policies of the subsidiaries are changed whenever necessary so as to ensure that uniform policies are applied to the group and the financial statements of the subsidiaries are compiled according to the latest approved balance sheet.

B/3 - Transactions with Non-Controlling interest holders

The group considers transactions with non-controlling interest as transactions with parties outside the group, and profits and losses resulting from the sale to non-controlling interest are recognized in the income statement, and purchases from non-controlling interest result in goodwill, which represents the difference between the consideration paid for the acquired shares and the book value of net assets to the subsidiaries company.

(b) Associates

Associates are all entities over which the Bank has significant influence directly or indirectly but not control, generally accompanying a shareholding of between 20% and 50% of the voting rights.

The Accounting for subsidiaries and associates are recorded by cost method. investments are recognized by the cost of acquisition including any good will, deducting impairment losses in value.

2.3 Segment reporting

A business segment is a group of assets and operations related to providing products or services that are subject to risks and returns that are different from those of other business segments. A geographical segment is engaged in providing products or services within a particular economic environment that are subject to risks and returns different from those of segments operating in different economic environments.

2.4 Foreign currency translation

(a) Functional and presentation currency

The financial statements are presented in Egyptian pound, which is the Bank's functional and presentation currency.

(b) Transactions and balances in foreign currencies

- The bank holds accounts in Egyptian pounds and proves transactions in other currencies during the financial Period on the basis of prevailing exchange rates at the date of the transaction, and re-evaluation of balances of assets and liabilities of other monetary currencies at the end of the financial Period on the basis of prevailing exchange rates at that date, and is recognized in the list Gains and losses resulting from the settlement of such transactions and the differences resulting from the assessment within the following items:

- Net trading income or net income from financial instruments classified at fair value through profit and loss of assets / liabilities held for trading or those classified at fair value through profit and loss according to type.

- Shareholders' equity of financial derivatives which are eligible qualified hedge for cash flows or eligible for qualified hedge for net investment.
- Other operating revenues (expenses) for the rest of the items.
- Changes in the fair value of monetary financial instruments denominated in foreign currencies and classified as Financial Investments at Fair value through OCI (debt instruments) are analyzed into valuation differences resulting from changes in amortized cost of the instrument, translation

differences arising from changes in foreign exchange rates and differences resulting from changes in the fair value of the instrument. Valuation differences are recognized in profit or loss to the extent they relate to changes in amortized cost and changes in exchange rates which are reported in the income statement under the line items 'revenues from loans and similar activities' and 'other operating revenues (expenses)' respectively. The remaining differences resulting from changes in fair value of the instrument are carried to 'reserve for cumulative change in fair value of Financial Investments at Fair value through OCI in the equity section.

- Valuation differences resulting from measuring the non-monetary financial instruments at fair value include gains and losses resulting from changes in fair value of those items. Revaluation differences arising from the measurement of equity instruments classified as at fair value through profit or loss are recognized in the income statement, whereas the revaluation differences arising from the measurement of equity instruments classified as available for sale financial investments are carried to 'reserve for cumulative change in fair value of Financial Investments at Fair value through OCI investments' in treasury bills section.

(c) Treasury bills

Treasury bills are recognized at their acquisition cost and appear in the statement of financial position at fair value excluding the balance of unearned returns.

2.5 Financial assets

The Bank classifies its financial assets in the following categories:

Financial assets classified as at fair value through profits or loss, loans and receivables, Financial Investments by Amortized cost, and Financial Investments at Fair value through OCI. The Bank's classification depends on the nature and purpose of the financial assets and is determined at the time of initial recognition.

Management determines the classification of its investments at initial recognition.

Financial assets and liabilities

1. Initial Recognition

All "regular" purchases and sales of financial assets are recognized on the trade date, the date on which the bank commits to purchase or sell the asset. Regular purchases and sales are the purchases and sales of financial assets that require delivery of assets within the time frame generally provided by law or by market norms.

Financial assets or liabilities are measured initially at fair value plus, in the case of an item not carried at fair value through profit or loss, transaction costs that are directly attributable to the acquisition or issue.

2. Measurement and Classification

On initial recognition, financial assets are classified as measured at cost, carried at fair value through other comprehensive income or at fair value through profit or loss. Financial assets are measured at amortized cost when each of the following conditions are met and is not classified as at fair value through profit or loss:

- Assets are retained in a business model that is intended to hold assets in order to collect contractual cash flows;
- The contractual terms of the financial assets on specific dates result in cash flows which are only payments on the original amount and interest on the original amount outstanding.

Financial assets are measured at fair value through other comprehensive income only when both of the following conditions are met and are not classified as at fair value through profit or loss:

Assets are retained in the business model, which is intended to achieve both the collection of contractual cash flows and the sale of financial assets. The contractual terms of the financial assets on specific dates result in cash flows that are only payments on the original amount and interest on the original amount outstanding. Upon initial recognition of equity investments that are not held for trading, the Bank may elect irrevocably to present changes in fair value in other comprehensive income. This choice is made on an investment-by-investment basis.

Expected credit losses (ECL)

The requirements in IFRS 9 represent a material change from the requirements of EAS number 26 Financial Instruments: Recognition and Measurement. The new standard leads to fundamental changes in the accounting of financial assets and some aspects of accounting of financial liabilities.

- The Bank applies a three-stage approach to measure expected credit losses for financial assets carried at amortized cost and debt instruments classified as at fair value through other comprehensive income. Assets are transferred through the following three stages on the basis of changes in the quality of credit ratings since the initial recognition of these assets:

- Stage 1: expected credit losses over 12 months

For exposures where there has been no significant increase in credit risk since initial recognition, the portion of expected long-term credit losses associated with the probability of default over the next 12 months is recognized.

- Stage 2: credit losses over life - non-credit impaired for credit exposures where there has been a significant increase in credit risk since initial recognition, but not credit default, expected credit losses are recognized over the life of the asset.

The Corporate Credit Customer Classification Form includes the assessment of customers based on quantitative and other qualitative criteria with different relative weights, leading to the customer's final evaluation, corresponding to probability of default at the level of the different classification categories, including the future outlook, which depends on the most important macroeconomic indicators to reflect the economic conditions, which in turn affect the customer's classification in the future, noting that credit customers are classified on an individual basis (individual) . With regard to the retail banking portfolio, asset purchase receivables and loans granted to small projects through different products with similar characteristics, they are evaluated and the expected credit losses are calculated on a consolidated basis (collective) and based on the data in the market.

- When calculating the expected credit losses, the credit rating model contracted with is based on the following equation:

(Probability of default rate X loss given default X Exposure at default) It is measured on an individual or collective basis and includes the corporate and small and medium-sized enterprise credit classification model to prepare a final evaluation of the customer corresponding to probability of default at the level of the different classification categories, including the outlook, which is based on the most important macroeconomic indicators to reflect the economic conditions

that In turn, affects the customer's classification in the future with the calculation of the loss given default of each facility, in addition to the loss given default (LGD) representing the loss in the exposed portion after excluding the expected recovery rate (the present value of what can be recovered from the investment value in the financial asset, whether from guarantees Or cash flows divided by the value at default 1- The recovery rate, and this rate is calculated for each facility individually) and the basis for the calculation is based on the main axes explained as follows:

- Cash flow
- Corresponding collateral to facilitate
- Financial leverage
- Any obligations on the facility with priority in paying for our bank debt

Exposure at default (E.A.D) is represented in the balance used on the date of preparing the position in addition to the amounts that may be used in the future by the client.

The criteria of classifying credit customers in 3 stages:

It includes the basis of classification for the portfolio of credit customers according to the quantitative and qualitative standards specified by the Central Bank and based on the experience of those in charge of management and accordingly, all customers have been classified according to the following criteria:

Stage 1:

Includes all customers who are regular in payment with payment arrears and those customers do not meet any of the criteria mentioned in the second and third stages. For large companies and medium enterprises credit customers, customers classified as risky are listed (1-6).

Stage 2:

This stage includes customers who have witnessed a significant increase in credit risk. The classification is done in this stage based on the following criteria:

Info.	Quantitative standards	Quality standards
Large and medium-corporate loans	-If the borrower delays in paying his contractual obligations from 30 to 90 days from the due date. -All clients who have a credit score 7 (risks need special attention). -A decrease in the creditworthiness of the borrower by three degrees compared to the degree of creditworthiness of the customer at the beginning of dealing with our bank	-A significant increase in the interest rate, which may negatively affect the borrower's activity and lead to an increase in credit risk. -Negative material changes in the activity and financial or economic conditions in which the borrower operates. -Scheduling request due to difficulties facing the borrower. -Negative material changes in actual or expected operating results or cash flows. -Negative future economic changes

		that affect the borrower's future cash flows -Early signs of cash flow problems such as delays in servicing creditors, business loans
Small and micro enterprise loans, retail bank loans and real estate loans	-The borrower's behavior exhibited a usual delay in repayment beyond the permissible time limit for repayment and with delay Periods, up to a maximum of 30 days. -Previous arrears are frequent during the previous 12 months.	Negative future economic changes that affect the borrower's future cash flows

Stage 3:

This stage includes loans and facilities that have experienced a decline in their value (NPL clients)

Which requires calculating the expected credit loss over the life of the asset on the basis of the difference between the book value and the present value of the expected future cash flows and is classified based on the following criteria:

Info.	Quantitative standards	Quality standards
Large and medium-corporate loans	-grades of credit rating 8,9,10. -and, or Delayed borrower more than 90 days in the payment of contractual installments	-The borrower has defaulted financially. - The disappearance of the active market for the financial asset or one of the borrower's financial instruments due to financial difficulties.
Small, Micro and infinitesimal Enterprise Loans	- Delayed borrower more than 90 days in the payment of contractual installments become in default case.	- The possibility that the borrower will enter the stage of bankruptcy and restructuring due to financial difficulties. - If the financial assets of the borrower are purchased at a significant discount that reflects the credit losses incurred.

Retail bank loans and real estate loans	- Delayed borrower more than 90 days in the payment of contractual installments become in default case.	Death or disability of the borrower
---	---	-------------------------------------

It was amended based on the Central Bank's circular to become 180 days.

Where the decision of the Board of Directors of the Central Bank of Egypt was issued at its meeting held on December 7, 2021, which stated:

First: For small and medium companies:

1. Customers are included within the third stage in the event of non-compliance with the contractual terms, in the event that there are dues equal to or more than 180 continuous days (instead of 90 days according to the current instructions).
2. For customers who were previously listed in the third stage for having dues equal to or more than (90) days, they will be upgraded to the second stage if the dues are less than 180 days, while continuing to retain the expected credit losses calculated for these customers.

Second: For small and medium companies - who are regular in payments according to the center on December 31, 2019 - and their default came as a result of the repercussions of the current crisis:

These customers must be upgraded from the third stage to the second stage, with an emphasis on continuing to calculate the expected credit losses on the basis of the third stage, until the customers fulfill all the conditions for promotion in accordance with the amendments mentioned in the first item above, so that the expected credit losses can be calculated on the basis of the second stage.

Third: All of the above are applied for a Period of 18 months starting from December 14, 2021

Defining the concept of default and amending the customer's classification and moving it to the third stage is an integral part of the risk management role, which includes quantitative criteria and other qualitative indicators, in accordance with the international standard for preparing financial statements No. 9 in paragraph No. (B5, 5, 37).

(3) Expected credit losses of NPL (non-performing loans):

Any of the following principles are followed to compute the loss given default (LGD) rate in order to calculate the expected credit losses (ECL) for irregular customers:

- The present value of future cash flows according to the programmed settlement and scheduling agreements
- The present value of the list guarantee after excluding judicial expenses related to implementation
- Historical failure rates

1. Business model

The Bank assesses the objective of the business model in which the asset is maintained at the business portfolio level. This method better reflects how business is managed and how information is presented to management. The following information is taken into consideration

Specific policies and objectives of the business portfolio and practical application of these policies. In particular, whether the management strategy focuses on the achievement of contractual interest income and the realization of cash flows through the sale or retention of assets for liquidity purposes:

- The risks that affect the performance of the business model (and the financial assets that are retained within that business model), how these risks are managed; the frequency, value and timing of the sales in prior Periods, the reasons for such sales, as well as their forecast for future sales activities. Information on sales activities cannot be taken into account alone from the rest of the activities. Rather, they are part of a comprehensive

assessment of how the Bank achieves the objectives of managing the financial assets as well as how to achieve cash flows.

Financial assets held for trading or managed, whose performance is measured at fair value, are measured at fair value through profit or loss where they are not held to collect contractual cash flows and are not held for the purpose of collecting cash flows And the sale of financial assets.

Assess whether contractual cash flows are only payments of the original amount and interest on the original amount outstanding:

For the purposes of this valuation, the original amount is determined on the basis of the fair value of financial assets at initial recognition. Interest is determined on the basis of the time value of the

money and the credit risk associated with the original principal over a given Period of time or other basic lending risk and costs (eg liquidity risk and administrative costs), as well as profit margin.

Reclassification

Financial assets are not recognized after initial recognition, unless the Bank changes the business model to manage financial assets

2. Disposal

Financial assets

The Bank derecognizes the financial assets at the end of the contractual rights of the cash flows from the financial asset or transfers its rights to receive the contractual cash flows in accordance with the transactions in which all significant risks and rewards of ownership relating to the transferred financial asset are transferred or when the Bank has not transferred or retained all the risks The fundamental benefits of ownership and did not retain control of financial assets.

When the financial asset is derecognized, the difference between the carrying amount of the financial asset (or the carrying amount allocated to the financial asset excluded) and the total of the consideration received (including any new acquired asset) In other comprehensive income is recognized in profit or loss.

Effective July 1, 2019, any gain / loss recognized in other comprehensive income in respect of investment securities in equity securities is not recognized in profit or loss on disposal of such securities.

If the terms of the financial assets are modified, the Bank assesses whether the cash flows of the financial assets are substantially different. If there are significant differences in cash flows, the contractual rights to the cash flows from the original financial assets are past due. In this case, the original financial assets are derecognized and the new financial assets are recognized at fair value.

The financial asset (in whole or in part) is derecognized when:

- Expiration of rights to receive cash flows from the original

The Bank has transferred substantially all the risks and rewards of the asset or has not transferred or retained all the material risks and benefits of the assets but transferred control over the assets.

- The financial liability is excluded when the liability has been incorporated or cancel or its tribute

2.6 Offsetting financial instruments

Financial assets and liabilities are offset if there is a legally enforceable right to offset the recognized amounts and there is an intention to settle on a net basis, or to receive the asset and settle the liability simultaneously.

2.7 Derivative financial instruments and hedge accounting

- Derivatives are initially recognized at fair value on the date on which a derivative contract is entered into and are subsequently re-measured at their fair value. Fair values are obtained from quoted market prices in active markets, including recent market transactions, and valuation techniques, including discounted cash flow models and options pricing models, as appropriate. All derivatives are carried as assets when fair value is positive and as liabilities when fair value is negative.
- Embedded derivatives, such as the conversion option in a convertible bond, are treated as separate derivatives when their economic characteristics and risks are not closely related to those of the host contract, provided that the host contract is not classified as at fair value through profit or loss as part of "net trading income". Embedded derivatives are not split if the Bank chooses to designate the entire hybrid contract as at fair value through profit or loss.
- The accounting treatment used to recognize changes in fair value of derivatives depends on whether or not the derivative is designated as a hedging instrument under hedge accounting rules and on the nature of the hedged item. The Bank designates certain derivatives as either:
 - Hedges of the fair value of recognized assets or liabilities or firm commitments (fair value hedge);
 - Hedging relating to future cash flows attributable to a recognized asset or liability or a highly probable forecast transaction (cash flow hedge).
 - Hedging for net investment in foreign operations relating to future cash flows attributable to a recognized (net investment hedge).

Hedge accounting is used for derivatives designated in a hedging relationship when the criteria are met.

- The Bank documents, at the inception of the transaction, the relationship between hedged items and hedging instruments, as well as its risk management objective and strategy for undertaking various hedge transactions. The Bank also documents its assessment, both at hedge inception and on an ongoing basis, of whether the derivatives that are used in hedging transactions are highly effective in offsetting changes in fair value of hedged items.

2.7.1 Fair value hedge

Changes in the fair value of derivatives that are designated and qualify as fair value hedges are recognized in profit or loss immediately, together with any changes in the fair value of the hedged asset or liability that are attributable to the hedged risk.

The effective portion of changes in the fair value of the interest rate swaps and the changes in the fair value of the hedged item attributable to the hedged risk are recognized in the 'net interest income'. The effective portion of changes in the fair value of the currency swaps are recognized in the 'net trading income'. Any ineffectiveness is recognized in profit or loss in 'net trading income'.

When the hedging instrument no longer qualified for hedge accounting, the adjustment to the book value of a hedged item is amortized which are accounted for using the amortized cost method, by charging to the profit and loss to the maturity. The adjustments made to the book value of the hedged equity instrument remains in the equity section until being excluded.

2.7.2 Cash flow hedge

The effective portion of changes in the fair value of derivatives designated and effective for cash flow hedge shall be recognized in equity while changes in fair value relating to the ineffective portion shall be recognized in the income statement in "net trading income".

Amounts accumulated in equity are transferred to income statement in the relevant Periods when the hedged item affects the income statement. The effective portion of changes in fair value of interest rate swaps and options are reported in "net trading income".

When a hedged item becomes due or is sold or if hedging instrument no longer qualifies for hedge accounting requirements, gains or losses that have been previously accumulated in equity remain in equity and shall only be recognized in profit or loss when the forecast transaction ultimately occurs. If the forecast transaction is no longer expected to occur any related cumulative gain or loss on the hedging instrument that has been recognized in equity shall be reclassified immediately to income statement. If the hedge no longer meets the criteria for hedge accounting, the adjustment to the carrying amount of a hedged item that is measured at amortized cost is amortized to profit or loss over the Period to maturity.

2.7.3 Net investment hedge

Accounting for net investment hedge is the same for cash flows hedge. Profit or loss from hedging instrument related to the effective portion of the hedge to be recognized in Equity, while it is recognized in the income statement directly for hedging instrument not related to the effective portion. Accumulated profit or loss in equity to be transferred to the income statement upon disposal of foreign transactions.

2.7.4 Derivatives that do not qualify for hedge accounting

Interest on and changes in fair value of any derivative instrument that does not qualify for hedge accounting is recognized immediately in the income statement in "net trading income" line item. However, gains or losses arising from changes in the fair value of derivatives that are managed in conjunction with designated financial assets or financial liabilities are included in "net income from financial instruments designated at fair value through profit or loss".

2.8 Interest income and expense

Interest income and expense for all interest-bearing financial instruments, except for those classified as held for trading or designated as at fair value through profit or loss, are recognized within 'interest income' and 'interest expense' in the income statement using the effective interest rate method. The effective interest rate method is a method of calculating the amortized cost of a financial asset or a financial liability and of allocating the interest income or interest expense over the relevant Period. The effective interest rate is the rate that exactly discounts estimated future cash payments or receipts through the expected life of the financial instrument or, when appropriate, a shorter Period to the net carrying amount of the financial asset or financial liability. When calculating the effective interest rate, the Bank estimates cash flows considering all contractual terms of the financial instrument (for example, prepayment options) but does not consider future credit losses. The calculation includes all fees and points paid or received between parties to the contract that are an integral part of the effective interest rate, transaction costs and all other premiums or discounts.

When loans or debts are classified as non-performing or impaired, related interest income are not recognized but rather, are carried off balance sheet in statistical records and are recognized as revenues on the cash basis as follows:

- 1- When collected and after recovery of all arrears for retail loans, personal loans, real estate loans for personal housing and loans to small business.
- 2- For corporate loans, interest income is also recognized on the cash basis, according to which interest earned during the Periods subsequent to reschedule agreements does not start to accrete on the loan principal until the Bank collects 25% of the rescheduled installments and after payments of the installments continue to be regular for at least one Period. if the customer is always paying at his due dates the interest calculated is added to the loan balance which makes revenues (interest on rescheduling without deficits) without interests aside before rescheduling which is avoiding revenues except after paying all the loan balance in the balance sheet before rescheduling.

2.9 Fees and commissions income

Fees and commissions charged by the Bank for servicing a loan are recognized as revenue as the services are provided. Recognition of such fees and commission in profit or loss ceases when a loan becomes non-performing or

is impaired in which case fees and commission income is rather marginalized and carried off the balance sheet. Recognition of such fees and commissions as revenues continues on the cash basis when the relevant interest income on the financial instrument is recognized since they are generally treated as an adjustment to the effective interest rate on the financial asset.

If it is probable that the Bank will enter into a specific lending arrangement, the commitment fee received is regarded as compensation for an ongoing involvement with the acquisition of a financial instrument and, together with the related transaction costs, is deferred and recognized as an adjustment to the effective interest rate. If the commitment expires without the Bank making the loan, the fee is recognized as revenue on expiry.

A syndication fee received by the Bank that arranges a loan and retains no part of the loan package for itself (or retains a part at the same effective interest rate for comparable risk as other participants) is compensation for the service of syndication. Such a fee is recognized as revenue when the syndication has been completed.

Fees and commissions resulting from direct negotiations or participation in such negotiations for the benefit of or on behalf of another party, such as those earned on the allotment of shares or other financial assets to a client or acquisition or disposal of entities for a client, are recognized as revenue when the specific transaction has been completed.

Administrative and other services fees are recognized as income on a time proportionate basis over the lifetime of the service.

Fees charged for financial planning services and custodian services provided over long Periods are recognized as income over the Period during which the service is rendered.

2.10 Dividend income

Dividends are recognized in the income statement when the bank's right to receive payment is established.

2.11 Purchase and resale agreements, sale and repurchase agreements

The financial instruments sold, subject to repurchase agreements, are reported as additions to the balance of treasury bills and other governmental notes in the assets side at the balance sheet, whereas the liability (purchase and resale agreement) is reported in the balance sheet as a deduction therefrom. Difference between the sale price and repurchase price is recognized as a return throughout the Period of the arrangement using the effective interest rate method.

2.12 Impairment of financial assets

(a) Assets carried at amortized cost

The Bank assesses at each balance sheet date whether there is objective evidence that a financial asset or group of financial assets is impaired. A financial asset or a group of financial assets is impaired and impairment losses are incurred only if there is objective evidence of impairment as a result of one or more events that occurred after the initial recognition of the asset (a 'loss event') and that loss event (or events) has an impact on the estimated future cash flows of the financial asset or group of financial assets that can be reliably estimated. The criteria that the Bank uses to determine that there is objective evidence of an impairment loss include:

- Cash flow difficulties experienced by the borrower (for example, equity ratio, net income percentage of sales);
- Breach of loan covenants or conditions;
- Initiation of bankruptcy proceedings;
- Deterioration of the borrower's competitive position;
- The Bank for reasons of economic or legal financial difficulties of the borrower by granting concessions may not agree with the Bank granted in normal circumstances;
- Deterioration in the value of collateral; and
- Downgrading below investment grade level.

The objective evidence of impairment loss for group of financial assets is the clear data indicate to a decline can be measured in future cash flows expected from this group since its initial recognition, although not possible to determine the decrease of each asset separately, for example increasing the number of failures in payment for One of the banking products.

The estimated Period between a loss occurring and its identification is determined by local management for each identified portfolio. In general, the Periods used vary between three months and 12 months.

The Bank first assesses whether objective evidence of impairment exists individually for financial assets that are individually significant, and individually or collectively for financial assets that are not individually significant and in this field the following are considered.

- If the Bank determines that no objective evidence of impairment exists for an individually assessed financial asset, whether significant or not, it includes the asset in a group of financial assets with similar credit risk characteristics and collectively assesses them for impairment according to historical default ratios.
- Assets that are individually assessed for impairment and for which an impairment loss is or continues to be recognized are not included in a collective assessment of impairment.
- If no impairment losses result from the previous assessment of impairment in this case the asset included in a collective assessment of impairment.

The amount of the loss is measured as the difference between the asset's carrying amount and the present value of estimated future cash flows (excluding future credit losses that have not been incurred) discounted at the financial asset's original effective interest rate. The carrying amount of the asset is reduced through the use of an allowance account and the amount of the loss is recognized in the income statement.

If a loan has a variable interest rate, the discount rate for measuring any impairment loss is the current effective interest rate determined under the contract when there is objective evidence for asset impairment. As a practical expedient, the Bank may measure impairment on the basis of an instrument's fair value using an observable market price. The calculation of the present value of the estimated future cash flows of a collateralized financial asset reflects the cash flows that may result from foreclosure less costs for obtaining and selling the collateral, whether or not foreclosure is probable.

For the purposes of a collective evaluation of impairment, financial assets are grouped on the basis of similar credit risk characteristics (i.e., on the basis of the Group's grading process that considers asset type, industry, geographical location, collateral type, past-due status and other relevant factors). Those characteristics are relevant to the estimation of future cash flows for groups of such assets by being indicative of the debtors' ability to pay all amounts due according to the contractual terms of the assets being evaluated.

For the purposes of evaluation of impairment for a group of a financial assets according to historical default ratios future cash flows in a group of financial assets that are collectively evaluated for impairment are estimated on the basis of the contractual cash flows of the assets in the Bank and historical loss experience for assets with credit risk characteristics similar to those in the Bank. Historical loss experience is adjusted on the basis of current observable data to reflect the effects of current conditions that did not affect the Period on which the historical loss experience is based and to remove the effects of conditions in the historical Period that do not currently exist.

Estimates of changes in future cash flows for groups of assets should reflect and be directionally consistent with changes in related observable data from Period to Period (for example, changes in unemployment rates, property prices, payment status, or other factors indicative of changes in the probability of losses in the Bank and their magnitude). The methodology and assumptions used for estimating future cash flows are reviewed regularly by the Bank.

The Bank assesses at each balance sheet date whether there is objective evidence that a financial asset or a group of financial assets classify at Fair value through OCI or by Amortized cost is impaired. In the case of equity investments classified at Fair value through OCI, a significant or prolonged decline in the fair value of the security below its cost is considered in determining whether the assets are impaired.

2.13 Real Estate Investments

The real estate investments represent lands and buildings owned by the Bank In order to obtain rental returns or capital gains and therefore does not include real estate assets which the bank exercised its work through or those that have owned by the bank as settlement of debts. The accounting treatment is the same used with fixed assets.

2.14 Intangible assets

2.14.1 Software

Expenditure on upgrade and maintenance of computer programs is recognized as an expense in the income Statement in the Period in which it is incurred. Expenditures directly incurred in connection with specific software are recognized as intangible assets if they are controlled by the bank and when it is probable that they will generate future economic benefits that exceed its cost within more than one Period. Direct costs include the will generate future economic benefits that exceed its cost within more than one Period. Direct costs include the cost of the staff involved in upgrading the software in addition to a reasonable portion of relative overheads. Upgrade costs are recognized and added to the original cost of the software when it is likely that such costs will increase the efficiency or enhance the performance of the computers software beyond its original specification Cost of computer software recognized as an asset shall be amortized over the Period of expected benefits which shall not exceed three Periods.

2.14.2 Other intangible assets

Other intangible assets represent intangible assets other than software programs (they include but not limited to trademark, licenses, and benefits of rental contracts). The other intangible assets are recorded at their acquisition cost and are amortized on the straight-line method or based on economic benefits expected from these assets over their estimated useful life (ranging from 33.33% to 100%) Concerning the assets which do not have a finite useful life, they are not subject to amortization they are annually assessed for impairment, while value of impairment (if any) is charged to the income statement.

2.15 Fixed Assets

Lands and buildings are mainly represented in head office, branches and offices premises. All fixed assets are disclosed at historical cost less accumulated depreciation and impairment losses. The historical cost includes expenditures that are directly attributable to the acquisitions of the fixed assets' items.

Subsequent costs are included in the assets carrying amount or recognized separately, as appropriate, only when it is probable that future economic benefits associated with the item will flow to the Bank and the cost of the item can be measured reliably. Repairs and maintenance expenses are recognized in profit or loss within "other operating costs" line item during the financial Period in which they are incurred.

Land is not depreciated. Depreciation of other fixed assets is calculated using the straight-line method to allocate their cost to their residual values over their estimated useful lives, as follows:

Premises and constructions	40 Periods
Fixtures and air conditions	5-10 Periods
Safes	20 Periods
Copiers and fax	8 Periods
Vehicles and means of transportation	5 Periods
Electric appliances	10 Periods
Mobile phones	3 Periods
Computers	3 Periods
Furniture	10 Periods

The residual value and useful lives of the fixed assets are reviewed on each balance sheet date and they are adjusted whenever it is necessary. Depreciated assets are reviewed for purposes of determining extent of impairment when

an event or change in conditions occurs suggesting that the book value may not be recovered. Consequently, the book value of the asset is reduced immediately to the asset's net realizable value in case increasing the book value over the net realizable value.

The net realizable value represents the net selling value of the asset or its utilization value whichever is greater. Gains and losses from the disposal of fixed assets are determined by comparing the net proceeds at book value. Gains (losses) are included within other operating income (expenses) in the income statement.

2.16 Other assets

This item includes other assets that were not classified under specific assets in the statement of financial position, such as accrued revenues, advance expenses, including taxes paid in excess (excluding tax liabilities), advance payments under the purchase account of fixed assets, and the deferred balance for the losses of the first day that were not It is depreciated after, the current and non-current assets that devolved to the bank in settlement of debts (after deducting the allowance for impairment losses), insurances, trusts, gold bars, commemorative coins, and accounts under settlement debit.

Most of the other assets are measured at cost, and if there is objective evidence of impairment losses in the value of those assets, then the value of the loss is measured for each asset separately by the difference between the asset's book value and its net selling value or the present value of the estimated future cash flows discounted at the current market rate for similar assets. Whichever is higher. The book value of the asset is reduced directly and the value of the loss is recognized in the income statement within the item of other operating income (expenses). If the impairment loss decreases in any subsequent Period, and that decrease can be linked objectively to an event that occurred after the impairment loss was recognized, then the previously recognized impairment loss is returned to the income statement, provided that this cancellation does not result in a book value of the asset at the date of recovering the impairment losses that exceeds the value that the asset would have reached had the impairment loss not been recognized.

2.17 Impairment of non-financial assets

Assets that have an indefinite useful life are not subject to amortization and are tested annually for impairment. Assets that are subject to amortization are reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount may not be recoverable. An impairment loss is recognized for the amount by which the asset's carrying amount exceeds its recoverable amount. The recoverable amount is the higher of an asset's fair value less costs to sell or value in use. For the purposes of assessing impairment, assets are grouped at the lowest levels for which there are separately identifiable cash flows (cash generating units). Non-financial assets that suffered impairment are reviewed for possible reversal of the impairment at each reporting date.

2.18 Leases

(a) Being lessee

Lease payments made under operating leases, net of any discounts received from the lessor, are recognized in profit or loss on a straight-line basis over the term of the contract.

(b) Being lesser

Assets leased out under operating lease contracts are reported as part of the fixed assets in the balance sheet and are depreciated over the expected useful lives of the assets, on the same basis as other property assets. Lease rental income is recognized net of any discounts granted to the lessee, using the straight line method over the contract term.

2.19 Cash and cash equivalents

For the purposes of the cash flow statement, cash and cash equivalents comprise balances with less than three months' maturity from the date of acquisition, They include cash and balances due from Central Bank of Egypt (other than those under the mandatory reserve), balances due from banks, treasury bills and other governmental notes.

2.20 Other Provisions

Provisions for restructuring costs and legal claims are recognized when: the Bank has a present legal or constructive obligation as a result of past events; it is more likely than not that an outflow of resources will be required to settle the obligation; and the amount has been reliably estimated.

Where there are a number of similar obligations, the likelihood that an outflow will be required in settlement is determined by considering the class of obligations as a whole. A provision is recognized even if the likelihood of an outflow with respect to any one item included in the same class of obligations may be small. Provisions which negated the purpose of wholly or partly repaid within the item other operating income (expense).

Provisions are measured at the present value of the expenditures expected to be required to settle the obligation which become due after one Period from the financial statement date using appropriate rate for the due date (without being affected by effective tax rate) which reflect time value of money, and if the due date is less than one Period we calculate the estimated value of obligation but if it have significant impact then it calculated using the present value.

2.21 Financial Guarantees Contracts

A financial guarantee contract is a contract issued by the bank as security for loans or debit current accounts due from its clients to other entities that requires the bank to make specified payments to reimburse the holder for a loss it incurs because a specified debtor fails to make payment when due in accordance with the original or modified terms of a debt instrument. These financial guarantees are presented to the banks, corporations and other entities on behalf of the bank's clients. When a financial guarantee is recognized initially, the Bank shall measure it at its fair value that is directly attributable to the issue of such financial guarantee.

The amount initially recognized less, when appropriate, cumulative amortization of security fees recognized in the income statement using the straight-line method over the term of the guarantee and The best estimate for the payments required to settle any financial obligation resulting from the financial guarantee at the balance sheet date Such estimates are made based on experience in similar transactions and historical losses as supported by management judgment. Any increase in the obligations resulting from the financial guarantee, shall be recognized within other operating income (costs) in the income statement.

2.22 Employees' benefits

2.21.1 Pension obligations

The bank has employees insurance fund, it was founded at the first of July 2000 under the law of 54 for the Period 1975 and its executive regulations for the purpose of granting insurance and compensation benefits for the members. This fund rules and modifications are applied to all the bank staff in the head office and its branches in Arab Republic of Egypt.

The Bank is committed to lead to the fund monthly and annual subscriptions in accordance with the Rules of the Fund and its amendments, and there are no obligations to the bank following the payment of additional contributions. Contributions are recognized in expenses of employee benefits when due. The recognition of contributions paid in advance as an asset to the extent that its payment to the reduction of future payments or cash refund.

2.21.2 Post-employment benefits – Health Care

The bank provides health care benefits to retirees after the end of service, and the entitlement to these benefits is usually conditional on the worker remaining in service until retirement age and completion of a minimum service Period. The health care commitment is accounted for as defined contribution schemes.

2.23 Income taxes

Income tax on the profit or loss for the Period includes each of Period tax and deferred tax and is recognized in the income statement except for income tax relating to items of equity that are recognized directly in equity.

Income tax is recognized based on net taxable profit using the tax rates applicable at the date of the balance sheet in addition to tax adjustments for previous Periods.

Deferred taxes arising from temporary time differences between the book value of assets and liabilities are recognized in accordance with the principles of accounting and value according to the foundations of the tax, this is determining the value of deferred tax on the expected manner to realize or settle the values of assets and liabilities, using tax rates applicable at the date of the balance sheet.

Deferred tax assets of the Bank recognized when there is likely to be possible to achieve profits subject to tax in the future to be possible through to use that asset, and is reducing the value of deferred tax assets with part of that will not come from tax benefit expected during the following Periods, that in the case of expected high benefit tax, deferred tax assets will increase within the limits of the above reduced.

2.24 Borrowing

Borrowing is recognized initially at fair value net of transaction costs incurred. Borrowings are subsequently stated at amortized cost, any difference between proceeds net of transaction costs and the redemption value is recognized in the income statement over the Period of the borrowings using the effective interest method.

2.25 Capital

2.25.1 Capital issuance cost

Cost of issuance of new shares, issuance of shares to effect an acquisition, or issue of share options, net of tax benefits, are reported a deduction from equity.

2.25.2 Dividends

Dividends are recognized when the general assembly of shareholders approves them. Dividends include the employees' profit share and the board of directors' remuneration as prescribed by the Bank's articles of association and the corporate law.

2.25.3 Treasury shares

in case of purchasing treasury stocks the purchased amount is deducted from shareholders' equity till its cancellation and in case of selling or reissuing these stocks all collected amounts will be added to shareholders' equity.

2.26 Trust activities

The bank practices trust activities that result in ownerships or management of assets on behalf of individuals, trusts, and retirement benefit plans. These assets and related income are excluded from the bank's separate financial statements, as they are assets not owned by the bank.

2.27 Comparatives figures

Comparative figures are reclassified, where necessary, to conform with changes in the current Period presentation.

3. Financial risk management

The Bank's activities expose it to a variety of financial risks and those activities involve the analysis, evaluation, acceptance and management of some degree of risk or combination of risks. Taking risk is core to the financial business, and the operational risks are an inevitable consequence of being in business. The Bank's aim is therefore

to achieve an appropriate balance between risk and return and minimize potential adverse effects on the Bank's financial performance. And the most important types of financial risks are credit risk, market risk, liquidity risk and other operating risks. Also market risk includes exchange rate risk, rate of return risk and other prices risks.

The Bank's risk management policies are designed to identify and analyses these risks, to set appropriate risk limits and controls, and to monitor the risks and adherence to limits by means of reliable and up-to-date information systems. The Bank regularly reviews its risk management policies and systems to reflect changes in markets, products and emerging best practice.

Risk management is carried out by a risk department under policies approved by the Board of Directors. Bank Treasury identifies, evaluates and hedges financial risks in close co-operation with the Bank's operating units. The Board provides written principles for overall risk management, as well as written policies covering specific areas, such as foreign exchange risk, interest rate risk, credit risk, use of derivative financial instruments and non-derivative financial instruments. In addition, credit risk management is responsible for the independent review of risk management and the control environment.

3.1 Credit risk

The Bank takes on exposure to credit risk, which is the risk that counterparty will cause a financial loss for the Bank by failing to discharge an obligation. Management therefore carefully manages its exposure to credit risk. Credit exposures arise principally in loans and advances, debt securities and other bills. There is also credit risk in off-balance sheet financial arrangements such as loan commitments. The credit risk management and control are centralized in a credit risk management team in Bank Treasury and reported to the Board of Directors and head of each business unit regularly.

3.1.1 Credit risk measurement

(a) Loans and advances to banks and customers

To measure credit risk related to loans and advances extended to banks and customers, the bank examines the following three components:

- Probability of default of the customer or others in fulfilling their contractual obligations.
- The current position and the likely expected future development from which the bank can conclude the balance exposed to default (Exposure at default).
- Loss given default.

The daily activities of the bank's business involves of measurement for credit risk which reflect the expected loss (The Expected Loss Model) required by the Basel Committee on Banking Supervision. The operating measures may interfere with the impairment charge according to the Egyptian Accounting Standard no. (26), which depends on losses realized at the balance sheet's date (realized losses models) and not on expected losses.

The Bank assesses the probability of default of individual counterparties using internal rating tools tailored to the various categories of counterparty. They have been developed internally and combine statistical analysis with credit officer judgment and are validated, where appropriate.

Clients of the Bank are segmented into four rating classes.

The Bank's rating scale, which is shown below, reflects the range of default probabilities defined for each rating class. This means that, in principle, exposures migrate between classes as the assessment of their probability of default changes. The rating tools are kept under review and upgraded as necessary. The Bank regularly validates the performance of the rating and their predictive power with regard to default events.

Bank's internal ratings scale:

Bank's internal ratings scale	Bank's rating Description of the grade
1	Performing loans
2	Regular watching

3	Watch list
4	Nonperforming loans

And the loans expose to default depend on the bank's expectation for the outstanding amounts when default occur. example, as for a loan position is the nominal value while for commitments the bank enlists all already drawn amounts besides these amounts expected to be withdrawn until the date of default, if it happens.

Loss given default or loss severity represents the Bank expectation of the extent of loss on a claim should default occur. It is expressed as percentage loss per unit of exposure and typically varies by type of counterparty, type and seniority of claim and availability of collateral or other credit mitigation.

(b) Debt instruments and treasury and other governmental notes

For debt instruments and treasury bills and other governmental notes, external rating and if this rating is not available, then other ways similar to those used with the credit customers are uses. The investments in those securities and bills are viewed as a way to gain a better credit quality mapping and maintain a readily available source to meet the funding requirement at the same time.

3.1.2 Risk limit control and mitigation policies

The bank manages, limits and controls concentrations of credit risk wherever they are identified – in particular, to individual counterparties and banks, and to industries and countries.

The Bank structures the levels of credit risk it undertakes by placing limits on the amount of risk accepted in relation to one borrower, or groups of borrowers, and to geographical and industry segments. Such risks are monitored on a revolving basis and subject to an annual or more frequent review, when considered necessary. Limits on the level of credit risk by individual, counterparties, product, and industry sector and by country are approved quarterly by the Board of Directors.

The exposure to any one borrower including banks and brokers is further restricted by sub-limits covering on- and off-balance sheet exposures, and daily delivery risk limits in relation to trading items such as forward foreign exchange contracts. Actual exposures against limits are monitored daily.

Exposure to credit risk is also managed through regular analysis of the ability of borrowers and potential borrowers to meet interest and capital repayment obligations and by changing these lending limits where appropriate.

Some other specific control and mitigation measures are outlined below:

(a) Collateral

The bank employs a range of policies and practices to mitigate credit risk. The most traditional of these is the taking of security for funds advances, which is common practice. The bank implements guidelines on the acceptability of specific classes of collateral or credit risk mitigation. The principal collateral types for loans and advances are:

- Mortgages over residential properties;
- Mortgage business assets such as premises, and inventory;
- Mortgage financial instruments such as debt securities and equities.

Longer-term finance and lending to corporate entities are generally secured; revolving individual credit facilities are generally unsecured. In addition, in order to minimize the credit loss the bank will seek additional collateral from the counterparty as soon as impairment indicators are noticed for the relevant individual loans and advances.

Collateral held as security for financial assets other than loans and advances is determined by the nature of the instrument. Debt securities, treasury and other governmental securities are generally unsecured, with the exception of asset-backed securities and similar instruments, which are secured by portfolios of financial instruments.

(b) Derivatives

The bank maintains strict control limits on net open derivative positions (i.e., the difference between purchase and sale contracts), by both amount and term. At any one time, the amount subject to credit risk is limited to the current fair value of instruments that are favorable to the bank (i.e., assets where their fair value is positive), which in relation

to derivatives is only a small fraction of the contract, or notional values used to express the volume of instruments outstanding. This credit risk exposure is managed as part of the overall lending limits with customers, together with potential exposures from market movements. Collateral or other security is not usually obtained for credit risk exposures on these instruments, except where the bank requires margin deposits from counterparties.

Settlement risk arises in any situation where a payment in cash, securities or equities is made in the expectation of a corresponding receipt in cash, securities or equities. Daily settlement limits are established for each counterparty to cover the aggregate of all settlement risk arising from the Bank market transactions on any single day.

(c) Master Netting Arrangements

The bank further restricts its exposure to credit losses by entering into master netting arrangements with counterparties with which it undertakes a significant volume of transactions. Master netting arrangements do not generally result in an offset of balance sheet assets and liabilities, as transactions are usually settled on a gross basis. However, the credit risk associated with favorable contracts is reduced by a master netting arrangement to the extent that if a default occurs, all amounts with the counterparty are terminated and settled on a net basis. The Bank overall exposure to credit risk on derivative instruments subject to master netting arrangements can change substantially within a short Period, as it is affected by each transaction subject to the arrangement.

(d) Credit-Related Commitments

The primary purpose of these instruments is to ensure that funds are available to a customer as required.

Guarantees and standby letters of credit carry the same credit risk as loans. Documentary and commercial letters of credit – which are written undertakings by the Bank on behalf of a customer authorizing a third party to draw drafts on the Bank up to a stipulated amount under specific terms and conditions – are collateralized by the underlying shipments of goods to which they relate and therefore carry less risk than a direct loan.

Commitments to extend credit represent unused portions of authorizations to extend credit in the form of loans, guarantees or letters of credit. With respect to credit risk on commitments to extend credit, the Bank is potentially exposed to loss in an amount equal to the total unused commitments. However, the likely amount of loss is less than the total unused commitments, as most commitments to extend credit are contingent upon customers maintaining specific credit standards. The Bank monitors the term to maturity of credit commitments because longer-term commitments generally have a greater degree of credit risk than shorter-term commitments.

3.1.3 Impairment and provisioning policies

The internal rating systems described in Note 3.1.1 focus more on credit-quality mapping from the inception of the lending and investment activities.

In contrast, impairment provisions are recognized for financial reporting purposes only for losses that have been incurred at the balance sheet date based on objective evidence of impairment. Due to the different methodologies applied, the amount of incurred credit losses provided for in the financial statements are usually lower than the amount determined from the expected loss model that is used for internal operational management and CBE regulation purposes.

The impairment provision shown in the balance sheet at the Period-end is derived from each of the four internal rating grades. However, the majority of the impairment provision comes from the bottom two grades. The table below shows the percentage of the Bank's in balance sheet items relating to loans and advances and the associated impairment provision for each of the Bank's internal rating categories:

Bank's rating	Mar 31,2026		Dec 31,2025	
	Loans and advances	ECL provisions	Loans and advances	ECL provisions
loans Performing	91.93%	16.06%	90.41%	18.14%
Regular watching	3.47%	9.34%	4.51%	11.51%
list watch	1.52%	8.17%	2.66%	20.18%
Non-performing loans	3.08%	66.42%	2.42%	50.17%
	100%	100%	100%	100%

The internal rating tools assists management to determine whether objective evidence of impairment exists under EAS 26, based on the following criteria set out by the Bank:

- Cash flow difficulties experienced by the borrower
- Breach of loan covenants or conditions
- Initiation of bankruptcy proceedings
- Deterioration of the borrower's competitive position
- Bank granted concessions may not be approved under normal circumstances, for economic, legal reasons, or financial difficulties facing the borrower
- Deterioration in the value of collateral
- Deterioration in the credit situation

The Bank's policy requires the review of all financial assets that are above materiality thresholds at least annually or more regularly when individual circumstances require. Impairment allowances on individually assessed accounts are determined by an evaluation of the incurred loss at balance-sheet date on a case-by-case basis, and are applied to all individually significant accounts. The assessment normally encompasses collateral held (including re-confirmation of its enforceability) and the anticipated receipts for that individual account. Collectively assessed impairment allowances are provided portfolios of homogenous assets by using the available historical experience, experienced judgment and statistical techniques.

3.1.4 Pattern of measuring the general banking risk

In addition to the four categories of measuring credit worthiness discussed in disclosure 3.1.1.a the management makes small groups more detailed according to the CBE rules. Assets facing credit risk are classified to detailed conditions relying greatly on customer's information, activities, financial position and his regular payments to his debts.

The bank calculates the provisions needed for assets impairment in addition to credit regulations according to special percentages determined by CBE.

In the case of increase of impairment loss provision needed according to CBE than that for purposes of making the financial statements according to the EAS, the general banking risk reserve is included in owners' equity deducted from the retained earning with this increase, this reserve is modified with Periodic basis with the increase and decrease, which equals the increase in provisions and this reserve is not distributed.

With CBE ratings and rates of provisions needed for assets impairment related to credit risk

First: institutional worthiness:

CBE Rating	Description	Provision %	Internal Rating	Internal Description
1	Low Risk	0	1	Performing loans
2	Average Risk	1%	1	Performing loans
3	Satisfactory Risk	1%	1	Performing loans
4	Reasonable Risk	2%	1	Performing loans
5	Acceptable Risk	2%	1	Performing loans
6	Marginally Acceptable risk	3%	2	Regular watching
7	Watch list	5%	3	Watch list
8	Substandard	20%	4	Non-performing loans
9	Doubtful	50%	4	Non-performing loans
10	Bad Debt	100%	4	Non-performing loans

Second: Classification of small loans according to economic activities:

Terms of classification	Performing loans	Non-performing loans		
		Substandard	Doubtful	Bad Debt
payment Period Delayed	—	6Months	9Months	12Months
Provision	%3	%20	%50	%100

3.2 Market Risks

The bank is exposed to market risk represented in volatility in fair value or future cash flows resulted from changes in market prices. Market risk arise from the open positions of interest rates, currency rates and the equity instruments, the management of market risk resulted from trading, non-trading activities are centralized in the market risk department in the bank.

Market risk measurement methods

The following are the most important measurement tools used to control market risk:

The Bank manages market risks resulting from fluctuations in interest rates, foreign exchange rates, and securities prices, which arise primarily through financial investments, the Bank's resource allocations, and foreign exchange transactions. This risk is managed by monitoring and evaluating changes in economic and market conditions and their potential impact on the Bank's financial position and profits, as well as scenarios predicting price trends and influencing factors that increase the Bank's exposure to market risks.

The Bank applies the standard approach when calculating the capital requirement required to meet market risks for the trading portfolio through cumulative construction, i.e., calculating the capital requirement for each type of market risk separately and then summing them to arrive at the total capital requirement, in accordance with the regulations issued by the Central Bank of Egypt.

The bank also monitors and evaluates the return rate risks of the non-trading portfolio by monitoring the re-pricing gap limits sensitive to changes in the return rate, approved by the Assets and Liabilities Committee, as well as calculating the return at risk (EAR) and the change in economic value (EV), in light of the Central Bank of Egypt's relevant regulations.

Value At Risk

The Bank applies the "VaR" method to its trading and non-trading portfolios to estimate the market risk of existing positions and the maximum expected loss, based on a number of assumptions regarding changes in market conditions.

VaR is a statistical forecast of the potential loss of existing portfolios resulting from adverse market movements. It represents the bank's maximum potential loss, according to a specified confidence factor (99%). Therefore, there is a 1% probability that the actual loss will be greater than the expected value at risk for a holding Year (one day) before closing open positions. The bank measures the value at risk by studying historical movements in return rates, historical prices, and the extent of correlation with various types of risks. If the prescribed limits for the value at risk are exceeded, the approval of the Assets and Liabilities Committee is obtained. The prescribed limits are sent daily to the bank's senior management by the Market Risk Department and presented to the Board of Directors' Risk Committee on a quarterly basis (standardized approach), in accordance with the supervisory instructions issued by the Central Bank of Egypt in this regard. The bank calculates capital requirements to meet market risks according to the standardized approach.

Stress Testing

Stress tests provide an indication of the size of the expected loss that may arise from severely unfavorable conditions. Stress tests are designed to suit the bank's activity using specific scenarios. Stress tests used in the bank's market risk management include a yield sensitivity test, and senior management Yearly monitors the results of stress tests through the Assets and Liabilities Committee.

3.2.1 The value exposed to risks according to the type of risks.

Total value at risk according to the type of risks.

	EGP Thousands			EGP Thousands

Total value at risk ratio / Tier 1 of the capital base	5.93%	3.12%	2.15%	3.08%	2.65%	2.31%

3.2.2 Foreign exchange rate volatility risk

The Bank is exposed to foreign exchange rate volatility risk in terms of the financial position and cash flows. The board of directors set limits for foreign exchange risk at the total value of positions at the end of the day and during the day when timely control is exercised.

3.2.3 Interest rate risk

The bank is exposed to impact of fluctuations in the levels of interest rates prevailing in the market that is the cash flow risk of interest rate represented in the volatility of future cash flow of a financial instrument due to change in the interest rate of the mentioned instrument. Whereas the interest rate is fair value risk is the risk of fluctuations in the value of the financial instrument due to changes in interest rates in the market.

The interest margin may rise due to these changes but still the profits may decrease if unexpected movements occur. The board of directors sets limits for the level of difference in the re-pricing of interest rate that the bank can maintain and Risk department in the bank daily monitors this.

The following table summarizes the extent of the bank's exposure to the risk of fluctuations in interest rates that includes the book value of financial instruments divided based on the price of re-pricing dates or maturity dates whichever is sooner:

3.2.4 Liquidity Risk Management Process

The processes of liquidity risk control carried by Assets and Liabilities management department in the bank include the following:

The daily funding is managed by monitoring and controlling the future cash flows to ensure the ability to fulfill all obligations and requirements. This includes replenishment of funds AS they mature or is borrowed by customers.

The bank maintains an active presence in The global money markets to ensure achievement of This target.

Monitoring liquidity ratios compared to the internal requirements of the bank and the Central Bank of Egypt's requirements.

Management of concentration and profile the debt maturities.

Monitoring and reporting take the form of cash flow measurement and projections for the next day, week, and month respectively. The starting point for these projections is represented in the analysis of the contractual maturities of financial liabilities and expected collection dates of financial assets.

Assets and Liabilities management department controls the unmatched medium term assets management, the level and type of the unutilized portion of loans' commitments, the extent of utilizing debit current accounts advances and the impact of contingent liabilities such as letters of guarantees and letters of credit.

3.3 Financing approach

Liquidity resources are reviewed by a separate team from treasury department of the bank to provide a wide variety of currencies, geographical regions, resources, products, and maturities.

Assets available to meet all liabilities and cover loan commitments include cash, balances with central Banks, balances due from Banks, treasury bills and other governmental notes, and loans and facilities to Banks and clients. Maturity term of percentage of loans to clients that are maturing within a Year is extended in the normal course of the Bank's business. Moreover, some debt instruments, treasury bills and other governmental notes are pledged to cover liabilities. The Bank has the ability to meet unexpected net cash flows through selling securities, and finding other financing sources.

3.4 Fair value of financial assets and liabilities

The following table summarizes the carrying amount and fair value of financial assets and liabilities that are not stated in the balance sheet at fair value:

• Due from Banks:

The fair value of floating rate placements and overnight deposits is their carrying amount. The estimated fair value of fixed interest bearing deposits is based on discounted cash flows using prevailing money-market interest rates for debts with similar credit risk and similar maturity date.

• Loans and advances to banks:

Loans and advances to banks are represented in loans other than deposits with banks.

The expected fair value for loans and advances represents the discounted value of future cash flows expected to be collected. Cash flows are discounted by adopting the current market rate to determine the fair value.

• Loans and advances to customers

Loans and Facilities are net of provisions for impairment. The estimated fair value of loans and Facilities represents the discounted amount of estimated future cash flows expected to be received. Expected cash flows are discounted at current market rates to determine fair value.

• Financial Investments:

Investments in financial securities in the previous table include only held to maturity bearing assets. Available for sale assets are assessed at fair value with the exception of equity instruments which the bank has been unable to evaluate their fair value to a reliable extent. The fair value of financial assets held to maturity is determined based on market rates or prices obtained from brokers. If these data are unavailable then the fair value is assessed by applying the financial markets' rates for negotiable financial securities with similar credit features, maturity dates as well as similar rates.

• Due to other banks and customers:

The estimated fair value of deposits with no stated maturity, which includes non-interest-bearing deposits, is the amount repayable on demand. The estimated fair value of fixed interest-bearing deposits and other borrowings not quoted in an active market is based on discounted cash flows using interest rates for new debts with similar remaining maturity.

3.4 Capital Management

The Bank's objectives when managing capital, which consists of another items in addition of owner's equity stated in balance sheet are:

- To comply with the capital requirements in Egypt.
- To safeguard the Bank's ability to continue as an ongoing concern so that it can continue to provide returns for shareholders and stakeholders
- To maintain a strong capital base to support the development of its business.
- Capital adequacy and the use of regulatory capital are monitored daily by the Bank's management, employing techniques based on the guidelines developed by the Basel Committee as implemented by the Central bank Of Egypt, for supervisory purposes. The required information is filed with the Authority on a quarterly basis

Central bank Of Egypt requires the following:

- Maintaining an amount of LE 5 billion in accordance with the Central Bank Law No. 194 of 2020 issued on September 15, 2020, and the Central Bank granted banks a Period not exceeding one Period for those addressed to it to reconcile their positions in accordance with its provisions, and the Central Bank permitted an extension of this Period for another Period or Periods not exceeding two Periods
- Maintaining a percentage between capital elements and asset and contingent liabilities elements weighted by risk equals to or exceeds 12.50 %. The numerator of the capital adequacy ratio consists of the following two tiers:

Tier One:

Represented in basic capital which consists of paid-in-capital (after deducting the book value of treasury shares), retained profits and reserves from profit appropriation with the exception of general banking risk reserve less any goodwill previously recognized or any carried over losses and 40% of intangible assets and deferred taxes.

The Conservative buffer is formed from the bank's annual profits as an additional independent pillar of the continuing base capital within the first tranche of the bank's capital base and thus to the total standard, and the Conservative buffer is originally configured from annual profits but is allowed to be configured if Components with the base capital meet this.

Tier Two:

Supplementary Capital consists of equivalent of the general risks provision related to creditworthiness bases issued by the Central Bank Of Egypt and not exceeding 1.25% of the total risk weighted assets and contingent liabilities, subordinated loans / deposits' term which exceed 5 Periods (with amortization of 20% of their value each Period of the last five Periods of their term) and 45% of the increase between fair value and book value of financial investments available for sale, held to maturity and associates and subsidiaries

When calculating the total numerator of the capital adequacy ratio it should be taken into consideration that the supplementary capital does not exceed in any way the basic capital and that subordinated loans (deposits) do not exceed half of the basic capital.

Asset at risk are weighted ranging from zero up to 100% classified in accordance with the nature of the debit side of each asset, to reflect the related credit risks, while taking into consideration cash collaterals. Same treatment is applied on off-balance amounts after making adjustments to reflect the contingent nature and probable losses of these amounts.

the following table summarizes the components of basic and supplementary capital and capital adequacy ratios as at March 31, 2026

According to Basel II:

Capital

Tier one (Basic capital):

Paid up capital

Reserves

Retained Earnings

Total balance of accumulated OCI items after regulatory adjustments

15.93%	17.17%

Based on consolidated financial statement figures and in accordance with Central Bank of Egypt regulation issued on 24 December 2012

The decision of the Central Bank of Egypt has been implemented to take into consideration the impact of 50 largest clients on the capital adequacy ratio starting from January 2017

3.6 Leverage Ratio

The measurement of financial leverage that supports the measurement of capital adequacy standard associated with the risk scale, simple and straightforward according does not account for the risk weights attributed its effectiveness to its ability to reduce the pressure on the banking system and indicate the leverage ratio to measure the adequacy of the first of its basic capital slide compared with total assets Bank, which is not less than 3%

The following table summarizes the components of leverage ratios as at March 31,2026 :

	Mar 31.2026	Dec 31.2025

Total Assets and contingent liabilities	249,361,975	234,606,878
Leverage ratio (%)	9.22%	9.47%

4- The significant accounting estimates and assumptions

The bank applies estimates and assumptions, which affect the amounts of assets and liabilities to be disclosed within the following financial Year. Estimates and assumptions are continuously assessed based on historical experience and other factors as well, including the expectations of future events, which are considered reasonable in the light of available information and surrounding circumstances.

(A) The fair value of derivatives

The fair values of financial instruments, which are not listed in active markets, is identified by applying valuation methods. When such methods are used to identify fair value, they are tested and reviewed Yearically by qualified personnel who are independent of the body that prepared them.

(B) Income taxes

The bank records the liabilities of the expected results of tax examination according to estimates of the probability of the emergence of additional taxes. When there is, a variance between the final result of taxes and the amounts previously recorded then these variances will affect the income tax and deferred tax provision for the Year in which the variance has been identified.

16- Derivatives

Currency Swap / yield contracts represent commitments to exchange a range of cash flows. These contracts result in currency exchange or rates (Fixed rate with variable rate, for example) or (all with swap contracts and currencies)

The actual exchange of contract amounts is only in certain currency swap contracts. The Bank's credit risk is the potential cost of replacing the swap contracts if the other parties fail to perform their obligations

This risk is monitored on an ongoing basis in comparison to the fair value and by contractual amount, and for credit risk control The Bank evaluates the counterparty using the same techniques used in the lending activities

Balance at the End of the Period	1,730,536	1,878,390

* The assets whose ownership has devolved to the bank in settlement of debts are proven at the value at which they were transferred to the bank, which is represented in the value of the debts that the bank management decided to waive in exchange for these assets. In the event that there is objective evidence of the occurrence of impairment losses in the value of these assets at a date subsequent to the transition, then the value of the loss is measured for each asset separately by the difference between the book value of the asset and its net selling value or the present value of future cash flows estimated from the use of the asset and discounted at the current market rate for similar assets, whichever is higher. The book value of the asset is reduced through the use of an impairment account and the recognition of the value of the loss in the income statement under the item "other operating income (expenses)". If the impairment loss decreases in any subsequent Period, and that decrease can be linked objectively to an event that occurred after the impairment loss was recognized, then the previously recognized impairment loss is returned to the income statement, provided that this response does not result in an asset value exceeding the value that was previously recognized. It would have been possible for the asset to reach it if these impairment losses had not been recognized, provided that the disposal of these assets is taken into account within the time Period specified in accordance with the provisions of the law. And if these assets are not disposed of within the specified Period in accordance with Law No. 194 of 2020, the general bank risk reserve is reinforced by the equivalent of 10% of the value of these assets annually. Under "other operating income (expenses)".

-22 Deferred Tax Assets / Liabilities

Deferred income tax was calculated based on the deferred tax differences according to the liability method using an effective tax rate for the current fiscal Period. Deferred tax assets resulting from carried forward tax losses shall not be recognized unless future taxable profits, through which carried forward taxable losses can be utilized, are likely to be proven. Clearing between deferred tax assets and liabilities is made in case of there is a legal justification for Offsetting between current tax on assets and liabilities and also when deferred income tax belong to the same tax authority, the following table represents deferred tax assets and liabilities :
